

NERD TUTORS

EVALUATION REPORT CARD

Student Name: Trinno Asphalt

Date Evaluated: 7/6/2026

Class: Class 12th

Subject: Economics

MARKS OBTAINED

20.5 / 25

Percentage Score: 82%

Performance Analysis

The student demonstrates a strong grasp of core economic concepts, particularly in monetary policy and calculations. The MCQ section was answered perfectly. However, the student lost marks in the descriptive section due to brevity. The answers for 3-mark questions were significantly shorter than the required 60-80 word length, failing to provide the depth expected at this level. The calculation in Q14 was correct, but the explanation was slightly rushed.

Areas to Improve

- For 3-mark questions, ensure you write at least 6-8 lines of content to meet the depth requirements.
- When explaining economic concepts, use more formal terminology (e.g., instead of 'get money', use 'access credit' or 'liquidity').
- Ensure all parts of a multi-part question are addressed clearly; in Q13, the identification of the situation was correct, but the explanation of the tools could be more detailed.

- Practice expanding on your points to ensure you reach the word count required for full marks.

Detailed Question Breakdown (Mistakes Only)

Q9

2 / 3

Infrastructural development by colonial government

What you wrote: "1. Railway, 2. Ports, 3. Roads."

Feedback: The points are correct, but the answer is too brief. It lacks the required explanation/elaboration to justify 3 marks.

Required Answer / Corrective Steps:

- Elaborate on each point. For example, mention that railways were introduced in 1850 to transport raw materials and finished goods.

Q10

2 / 3

Green Revolution criticism

What you wrote: "Yes, the statement is true. Green Revolution made India self-sufficient in food grains but was criticized on ecological grounds. The farmers were misusing the fertilizers due to that the soil will get fertilizer more due to that the crop will get dry."

Feedback: The student correctly identifies the self-sufficiency and ecological criticism. However, the explanation regarding the misuse of fertilizers is poorly phrased and lacks clarity on the specific ecological impacts like soil degradation.

Required Answer / Corrective Steps:

- Clearly explain that excessive use of chemical fertilizers leads to soil degradation and contamination of groundwater.

Q11

2 / 3

RBI functions for the government

What you wrote: "1. Lender of the Last Resort. 2. Issuing of Notes. When the commercial bank gets fails to get money from anywhere at last he goes to RBI."

Feedback: The student listed general functions of a Central Bank rather than the specific functions performed for the Government of India. The explanation provided is for 'Lender of Last Resort' (for banks), not 'Banker to the Government'.

Required Answer / Corrective Steps:

- Focus on the specific role of the RBI as a banker to the government, such as maintaining government accounts and providing loans to the government.

Q12

2.5 / 3

Modernisation as an economic goal

What you wrote: *"Modernisation extends beyond just the implementation of new technology. Modernisation changes into social outlook between man and women. Through new technology everything can be done in few minutes. Women can also work through this new technology."*

Feedback: The student captures the essence of social outlook and technology, but the answer is quite brief and lacks the depth required for a 3-mark question.

Required Answer / Corrective Steps:

- Expand on how social modernization includes equal rights and the inclusion of women in the workforce, which contributes to economic growth.

Q13

2 / 3

Identify situation and RBI steps

What you wrote: *"The student did not explicitly name the situation (Inflation) in the text, but the steps described (Repo Rate, Open Market Operations) imply understanding. The explanation of the steps is missing."*

Feedback: The student failed to explicitly identify the situation as 'Inflation'. The explanation of how the tools work to reduce money supply is missing.

Required Answer / Corrective Steps:

- Explicitly state that the situation is 'Inflation'. Explain the mechanism: selling securities reduces liquidity, and increasing rates makes borrowing costlier.

Q14

1.5 / 3

Calculate change in money creation

What you wrote: *"Calculated 10,000 and 5,000 correctly."*

Feedback: The calculations are correct, but the student failed to explicitly state the 'change' (difference) as requested by the question. The answer is too brief.

Required Answer / Corrective Steps:

- Clearly state: 'The change in money creation is $10,000 - 5,000 = 5,000$ crore'.
